Deploying The Logon Application For Mac

**Configure Template**

## Authentication Settings Template

Define administrator usernames / passwords used in your network.

Template Name: Macintosh

☐ Install as local system (the file must be copied to each system before installation)

### Impersonation
**Install impersonating this user on each target machine**

User name: Administrator

Password: •••••

Domain:

☑ Grant this user "logon as service" permissions (required unless the account already has this privilege).

☑ Remove "logon as service" permissions when finished (this will remove the privilege from the account, even if it was not granted by this program).

☑ Impersonate this user locally (required if you are not logged in as the above user). This user MUST exist on the local system, and copying locally cannot be enabled!

### Mac Authentication
**Enter Mac administrator authentication information**

User name: macadmin

Password: •••••••

### Linux / VMWare ESXi Authentication
**Enter Linux administrator authentication information**

User name:

Password:

**Save Changes**   **Cancel**
